

Water Market USA 2011

Publication information	ii
Foreword	iii
Executive summary	iv
Unit conversion factors used in this publication	v
1. Introduction	1
1.1 America's water crisis	1
Figure 1.1 Over-exploitation of groundwater in the United States	1
Figure 1.2 50-year growth projection for U.S. water spending	2
1.2 A tale of two markets	3
1.3 The industrial water market	3
Figure 1.3 U.S. construction spending on energy and manufacturing	3
1.3.1 Power and water	4
Figure 1.4 Water consumption in power generation	4
Figure 1.5 Average national freshwater consumption for thermoelectric power generation	5
Figure 1.6 Water required for energy production, with and without CO ₂ capture	5
Figure 1.7 Cooling systems by technology and water source	6
Figure 1.8 Additional water consumption for power generation by region (case 5 projection)	6
Figure 1.9 Capex on water and wastewater equipment for power generation, 2007-2016	7
1.3.2 Water in the oil and gas market	7
Figure 1.10 Water consumption by fuel type	8
Figure 1.11 Water to oil ratio across Shell's global portfolio, 2000-2007	9
Figure 1.12 Capex on water and wastewater equipment for oil and gas, 2007-2016	9
1.3.3 Water in manufacturing and mining	9
Figure 1.13 Capex on water and wastewater equipment in refining, 2007-2016	10
Figure 1.14 Capex on water and wastewater equipment for mining, 2007-2016	10
Figure 1.15 Capex on water and wastewater equipment for chemicals production, 2007-2016	10
Figure 1.16 Capex on water and wastewater equipment for metals production, 2007-2016	11
Figure 1.17 Capex on water and wastewater equipment for the automotive industry, 2007-2016	11
Figure 1.18 Capex on water and wastewater equipment for the food & beverage industry, 2007-2016	11
Figure 1.19 Capex on water and wastewater equipment for the microelectronics industry, 2007-2016	12
Figure 1.20 Capex on water and wastewater equipment for the pulp & paper industry, 2007-2016	12
Figure 1.21 Capex on water and wastewater equipment for the pharmaceutical industry, 2007-2016	12
Figure 1.22 Industrial water and wastewater technologies by market share, 2011	13
Figure 1.23 Industrial water and wastewater technologies by market share in 2016	13
Figure 1.24 Top ten state industrial water and wastewater technology markets by total capex, 2011-2016	13
Figure 1.25 Industrial water and wastewater treatment equipment markets by end-user sector, 2007-2016	14
Figure 1.26 Industrial water and wastewater treatment markets by equipment type, 2007-2016	14
Figure 1.27 The water treatment chemicals market by product type, 2010 (showing CAGR to 2016)	15
Figure 1.28 Water treatment chemicals market forecast data	15
1.4 The utility market	16
Figure 1.29 Utility water and wastewater capex and opex, 2008-2016	16
Figure 1.30 Utility operating revenues and costs, 2008-2016	17
Figure 1.31 20-year clean water needs by region and project type, 2008	17
Figure 1.32 Utility wastewater capex forecast to 2016	18
Figure 1.33 Utility wastewater capex forecast by region (2011-16 total)	18
Figure 1.34 20-year drinking water needs by region and project type, 2007	19
Figure 1.35 Utility drinking water capex forecast to 2016	20
Figure 1.36 Utility drinking water capex forecast by region (2011-16 total)	20
Figure 1.37 Utility water and wastewater technologies by market share in 2011	21
Figure 1.38 Utility water and wastewater technologies by market share in 2016	21

Figure 1.39 Utility water and wastewater technologies market by region, 2007-2016	21
Figure 1.40 Utility water and wastewater technologies market by equipment type, 2007-2016	22
Figure 1.41 New water and wastewater pipes, breakdown by material	22
Figure 1.42 Water and wastewater pipe rehabilitation, breakdown by technology	23
Figure 1.43 Private sector participation in the U.S. water sector: contract ops vs. investor owned utility revenues, 2008-2016	24
1.5 Note on the forecast	24
Figure 1.44 Summary forecast	24
2. Municipal finance	25
2.1 Introduction	25
Figure 2.1 Total national 20-year drinking water needs, 1995-2007	25
2.2 Current expenditure	25
Figure 2.2 Waste construction spending, 1993-2010	26
Figure 2.3 Drinking water construction spending, 1993-2010	27
Figure 2.4 Local government spending on water and wastewater, 1999-2008	27
Figure 2.5 Public utility spending and revenues, 1999-2008	28
2.3 Municipal government finance model	28
Figure 2.6 Utility cash flow model	28
2.4 Trends in federal finance	29
Figure 2.7 ARRA funding for water	29
Figure 2.8 Water infrastructure grants designated in EPA appropriations acts	30
2.5 State revolving funds	30
Figure 2.9 Annual federal capitalization grants to state SRFs	31
2.6 Bond finance	32
Figure 2.10 Municipal water and sewer revenue bonds rated by Fitch, 2002-2010	33
2.7 Alternative financing models	34
2.7.1 Private activity bonds	34
2.7.2 Asset sales	34
2.7.3 Equity sales	34
Figure 2.11 Equity sale financing model	35
2.7.4 Rate cases for investor-owned utilities	35
2.7.5 Consolidation	35
2.7.6 Infrastructure bank	35
2.7.7 Summary	36
2.8 Municipal cashflow model	36
Figure 2.12 U.S. municipal expenditure model, 2008	37
Figure 2.13 U.S. municipal expenditure model, 2009	38
Figure 2.14 U.S. municipal expenditure model, 2010	39
3. Equipment supply market & procurement models	40
3.1 Introduction	40
3.1.1 Project delivery models in the United States	40
3.2 The equipment supply chain	41
3.2.1 Municipalities	41
3.2.2 Consulting engineers	41
3.2.3 Manufacturers	42
3.2.4 Manufacturers' representatives	43
3.2.5 Contractors	45
3.3 Specifications and sole sourcing	46
3.4 Procurement rules and state funding	46
3.5 Critique of the U.S. municipal equipment supply chain	47
3.6 The benefits of design-build	48
3.6.1 Creative, collaborative teamwork	48
3.6.2 More innovative technologies can be incorporated into the design	48
3.6.3 Allows municipalities to make qualifications-based selection	49
3.6.4 Transferral of risk	49

3.6.5 Faster, cheaper project delivery	49
Figure 3.1 Table of selected projects and cost savings	50
3.6.6 Good for large, complex projects	50
3.7 Why design-bid-build remains the dominant project delivery method	50
3.7.1 Inconsistent regulatory framework	50
Figure 3.2 DB public procurement laws by state, 2010	51
3.7.2 Cities lose control	51
3.7.3 Historical inertia	52
3.7.4 Questioning design-build	52
3.7.5 Risk aversion	52
3.8 Case Study: New WWTP in Fillmore, CA	53
3.9 Design-build done right: What firms and cities should know	54
3.9.1 Lessons for cities	54
3.9.2 Crafting a successful design-build proposal	55
Figure 3.3 Treatment plant projects; market forecast by delivery model	56
Figure 3.4 Market share by delivery model forecast to 2016	57
4. Investing in water technology	58
4.1 Water technology investment: the bad news	58
Figure 4.1 Selection of Venture capital investments in the water sector, 2009	58
4.2 Water technology investment: the good news	60
4.3 Introduction to technologies for wastewater	60
4.4 Energy efficient primary treatment	61
4.4.1 Energy efficient aeration: Deep-shaft aeration systems	61
4.4.2 Advanced physical and chemical primary treatment	61
4.4.3 Ultrasound treatment of wastewater	61
4.4.4 Advanced oxidation technologies	61
4.4.5 Bromine-based disinfection	62
4.4.6 Pasteurization with waste heat	62
4.5 Energy management	62
4.5.1 Anaerobic membrane bioreactor	62
4.5.2 Microbial fuel cells	62
4.6 Biogas to energy	62
4.6.1 Stirling engines	62
4.6.2 Microturbines	63
4.7 Using waste heat	63
4.7.1 Waste heat recovery	63
4.7.2 Waste heat to electricity: Organic Rankine Cycle (ORC)	63
4.8 Making sludge/wastewater useful	63
4.8.1 Sludge-to-oil pyrolysis	63
4.8.2 Bioplastics from wastewater	64
4.9 Sludge treatment and disposal	64
4.9.1 Thermal pretreatment	64
4.9.2 Electroporation pretreatment	64
4.9.3 Pulse power electrical arc discharge pretreatment	64
4.9.4 Lysate-thickening centrifuge pretreatment	64
4.9.5 Ultrasonic pretreatment	64
4.9.6 Pressure homogenization pretreatment	65
4.9.7 Ozonation	65
4.9.8 Electro-osmosis sludge dewatering	65
4.9.9 Solar sludge drying	65
4.9.10 Supercritical Wet Air Oxidation (SCWO)	65
4.10 Nutrient removal/recovery	66
4.10.1 SHARON/ANAMMOX nitrogen removal	66
4.10.2 DEamMONification (DEMON)	66
4.10.3 Ammonia Recovery Process (ARP)	66

4.10.4 Phosphorus recovery as struvite	66
4.10.5 Phosphorus recovery from sewage sludge	66
4.10.6 Phosphorus recovery directly from wastewater	67
4.11 Co-digestion (biogas production)	67
4.12 Introduction to desalination and membrane technologies	67
4.13 New membrane technologies	67
4.13.1 Nano-engineered membranes	67
4.13.2 Aquaporins	68
4.13.3 Carbon Nanotubes	68
4.14 Membrane distillation	68
4.15 Forward osmosis	68
4.16 Zero liquid discharge (ZLD)	68
4.17 Deep sea reverse osmosis	69
4.18 Technology ratings	69
Figure 4.2 Desalination technology ratings	70
5. Water scarcity, desalination and reuse	71
5.1 The crisis of water scarcity	71
5.2 Understanding water scarcity	72
Figure 5.1 Water scarcity dynamics	72
5.3 Water demand	72
5.3.1 Thermoelectric water demand	72
5.3.2 Agricultural water demand	72
5.3.3 Industrial water demand	73
5.3.4 Domestic water demand	73
Figure 5.2 Sectoral water use	73
5.4 Water supply	73
Figure 5.3 Water resources in the U.S.	73
5.4.1 The River Colorado	74
Figure 5.4 The Colorado River Compact	74
Figure 5.5 The elevation of Lake Mead	74
5.4.2 The Ogallala Aquifer	75
5.4.2.1 The challenge of over-exploitation	75
5.4.2.2 Water conservation	75
5.5 Demand management	76
5.5.1 Water efficiency	76
5.6 Supply management	76
5.6.1 Water transport	76
5.7 Defining desalination	77
Figure 5.6 Contracted desalination capacity by feedwater type	77
5.8 Financing desalination	77
5.9 Desalination in context	78
Figure 5.7 Annual contracted and commissioned capacity in the U.S., 1980-2008	79
Figure 5.8 installed capacity by plant size, technology, feedwater type and user category	79
5.10 Permitting and political issues	80
5.11 Desalination forecast	81
5.11.1 Capital expenditure	81
Figure 5.9 U.S.: Desalination capital expenditure, 2007-2016	81
Figure 5.10 U.S.: Desalination capital expenditure breakdown, 2010	81
Figure 5.11 U.S.: Desalination capital expenditure breakdown, 2007-2016	81
5.11.2 Operating expenditure	82
Figure 5.12 Desalination operating expenditure, 2007-2016	82
Figure 5.13 U.S.: Desalination operating expenditure breakdown, 2010	82
Figure 5.14 U.S.: Operating expenditure breakdown, 2007-2016	82
5.11.3 Capacity	83
Figure 5.15 U.S.: Cumulative desalination capacity growth, membrane and thermal, 1990-2016	83

Figure 5.16 U.S.: Contracted, tracked and expected desalination capacity, 2006-2016	83
Figure 5.17 U.S.: Forecast desalination capacity assumptions by plant size and feedwater, 2007-2016 (m ³ /d)	84
5.12 Water reuse	84
5.13 Defining water reuse	85
5.14 Water reuse applications	86
Figure 5.18 Water reuse categories and typical applications	86
5.15 The price of water reuse	86
Figure 5.19 Typical cost of reclaimed water	86
Figure 5.20 Typical energy consumption by treatment processes	87
5.16 Water reuse and the water economy	87
5.16.1 Supply drivers and analysis	87
5.16.2 Pricing analysis	87
Figure 5.21 Pricing strategies for reclaimed water	88
5.17 Developments in water reuse	88
Figure 5.22 Summary of some municipal water reuse key milestone projects	88
5.18 Moving up the value chain	88
5.18.1 Water reuse in California	89
5.18.2 Indirect potable reuse	89
5.18.3 Public perception of indirect potable reuse (IPR)	89
5.18.4 Case Study: IPR in San Diego	89
5.18.4.1 Challenges overcome	90
5.18.5 Case study: Orange County Groundwater Replenishment System (OCGWRS)	90
5.18.5.1 Challenges overcome	90
5.18.6 The rationale for higher value water reuse	91
Figure 5.23 The model for agricultural water reuse: the theory	91

6.3 Conclusion	104
7. The Marcellus Shale	105
7.1 What is unconventional natural gas?	105
7.1.1 Geology	105
Figure 7.1 Shale gas plays in the lower 48 states of the U.S.	105
Figure 7.2 The Marcellus Shale	106
7.1.2 Extraction techniques	107
7.1.3 The water component	107
7.1.3.1 Stormwater runoff	107

7.1.3.2 Water supply	108
Figure 7.3 Water withdrawals in the Marcellus Shale play	108
Figure 7.4 Water withdrawals and sources in the Marcellus Shale	108
7.1.3.3 Management of the flowback and produced water	108
Figure 7.5 Classification of Class II wells	109
7.1.3.4 Discharging of waste fluids to surface water bodies including streams and rivers.	109
7.1.3.5 Hauling to municipal WWTPs, known as publicly owned treatment works (POTWs).	109
7.1.3.6 Hauling to commercial industrial wastewater treatment facilities.	109
7.1.3.7 Reclaimed flowback water can be used with or without treatment.	109
7.2 Geography: Proven reserves and predictions	109
Figure 7.6 Number of wells drilled in the Marcellus Shale	110
7.3 Regulatory framework	110
Figure 7.7 New effluent standards for oil and gas wastewater, April 2009	111
7.3.1 Outlook for regulations in the Marcellus Shale	111
8. Introduction to regional chapters	113
8.1 Overview of challenges	113
8.1.1 The major challenges for the nation's water systems include:	113
8.1.2 Inadequate investment to maintain infrastructure	113
8.1.3 Fragmented market	113
8.1.4 Municipal debt	113
8.1.5 Poor stormwater management	114
8.1.6 Increasingly strict environmental regulations	114
8.1.7 Water scarcity	114
8.2 Solutions and market opportunities	114
8.2.1 Solutions to inadequate investment, fragmented utilities, and municipal debt	114
8.2.2 Solutions to stricter environmental regulations and the need for better stormwater management	115
8.2.3 Solutions to water scarcity	115
8.3 Water and wastewater sector organization and structure	116
Figure 8.1 Environmental Protection Agency (EPA) regions	116
8.4 National legislation	117
8.5 Funding	117
8.6 Procurement	117
9. EPA Region 1: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, & Vermont	119
9.1 Demographic and economic indicators	119
Figure 9.1 Demographic and economic indicators	119
9.2 Overview of regional challenges	119
9.2.1 Environmental	119
9.2.2 Regulatory	120
9.2.3 Economic	120
9.3 Water and wastewater sector organization and structure	120
Figure 9.2 State sector structure: Connecticut	120
Figure 9.3 State sector structure: Maine	120
